Professional Summary

Senior Android Developer with 12+ years of experience, including 5+ years shaping architecture decisions across Android and backend systems. Expert in Kotlin, Java, Jetpack Compose, MVVM, Coroutines, Flow, Hilt, and Room, with hands-on Node.js/MySQL backend work. Led a migration of 80+ Activities to Hilt and Jetpack DataStore, and resolved production-critical defects across client, API, and database layers, including a SQL bug silently unpublishing live job postings. Experienced in offline-first apps, BLE and peripheral integration, WCAG-aligned accessibility, and mentoring engineers.

Key Skills

Android App Development | Mobile Application Architecture | Legacy Code Modernization | Offline-First Design | Production Debugging & Root-Cause Analysis | Performance & Memory Optimization | BLE & Hardware Integration | Accessibility (WCAG, TalkBack) | Code Reviews & Technical Mentoring | Agile/Scrum

Technical Skills

Languages: Kotlin, Java, JavaScript, Python, SQL
Android: Android SDK, Jetpack Compose, Jetpack (ViewModel, LiveData, Navigation, WorkManager, Data Binding), MVVM
Architecture: Hilt, Dagger, Dependency Injection, State Management, Offline-First Architecture
Async & Data: Kotlin Coroutines, Flow, Room, SQLite, Jetpack DataStore, SharedPreferences
Networking: Retrofit, REST APIs, Moshi, Gson, JSON
Hardware: Bluetooth Low Energy (BLE), thermal printers, barcode scanners, POS/card readers, biometric devices
Backend: Node.js, Express, MySQL, Stored Procedures, Flask, FastAPI
AI-Assisted Development: Claude Code, AI-assisted coding, codebase analysis, debugging, refactoring, unit-test generation, code review
Testing & Quality: JUnit, Espresso, Firebase Crashlytics, LeakCanary
Tools & CI/CD: Git, GitHub, GitHub Actions, Jenkins, Android Studio, Firebase, Postman

Work Experience

Senior Software Engineer – Android | TalentMicro Innovations Pvt Ltd | Chennai, India Oct 2020 – Present

Lead Android development for enterprise recruitment, HR, and automation products (Tallite, WhatMate, TalliteSS, CVMine, FileShore), and contribute to architecture decisions across Android and backend.

- Led an architecture migration of 80+ Activities from legacy SharedPreferences and manual dependencies to Hilt and Jetpack DataStore, redesigning data access with suspend functions and lifecycle-scoped Coroutines.
- Merged scattered ViewModel logic into a single TicketViewModel, removing a redundant MainActivityViewModel and duplicate API call paths.
- Migrated JSON serialization to Moshi and built REST integrations with Retrofit, Coroutines, and Flow, with offline-first persistence in Room/SQLite.
- Fixed a static-reference memory leak in the login flow using WeakReference, stopping Activity instances from being retained across sessions and removing a likely source of OOM crashes.
- Found and fixed a production SQL defect (COALESCE with LEFT JOIN defaults) that was silently unpublishing live job postings; rewrote expiry logic with explicit null handling and added schema-level safeguards.
- Removed duplicate records from a core organization table with zero downtime, using an upsert-level guard plus a six-step cursor-based cleanup.
- Fixed a leave-approval workflow defect spanning MySQL stored procedures and reporting views, restoring correct approval status across the HR platform.
- Built Node.js/Express services, including moving complex stored-procedure logic for job matching into parameterized Node.js queries.
- Added accessibility support (TalkBack labels, focus order, scalable fonts) and tracked stability issues with Crashlytics and LeakCanary.

- Review code and guide junior engineers on architecture and implementation quality; take part in sprint planning and production support.

Software Engineer – Android | HireCraft Software Pvt Ltd | Chennai, India Apr 2016 – Oct 2020

- Built and maintained Android apps in Kotlin and Java across multiple product workflows using MVVM, with clear separation of UI, presentation, and data layers.
- Integrated third-party SDKs and libraries, and improved app performance through profiling, debugging, and defect fixes.
- Implemented localization, scalable fonts, and screen-reader support.
- Contributed to peer code reviews, coding standards, and Agile delivery with cross-functional teams.

Junior Android Developer | Benchmark Business Software | Chennai, India Jul 2014 – Apr 2016

- Designed BLE communication for a Kitchen Order Ticket (KOT) app and integrated Bluetooth thermal printers and barcode scanners for real-time ticket printing at kitchen stations.
- Built BLE device communication for a rural banking collection app, integrating handheld biometric devices and portable receipt printers for cash collection and passbook printing.
- Delivered reliable device interaction and data handling in low-connectivity rural environments.
- Developed and debugged core app features, localization, and accessibility, and resolved Android and peripheral-integration issues.

Key Projects

WhatMate | AI-Driven Enterprise Automation Platform | Android & Backend 2020 – Present

- Built Android features for enterprise automation workflows and optimized client-to-backend communication for faster task execution. 10,000+ downloads, 4.1★ on Google Play.

Tallite | Global Recruitment Platform | Full-Stack 2021 – Present

- Built Flask and FastAPI modules for job management, referral tracking, authentication, and real-time status updates.

FileShore | Cloud Document Management | Full-Stack 2023 – Present

- Built secure sharing, multi-factor authentication, access control, and multi-level e-signature workflows.

CVMine & TalliteSS | Recruitment and HR/RPO Platforms | Backend 2020 – Present

- Built secure APIs for CV encryption, job search, and employer-agent connections, plus role-based access and workflow automation for candidate profiling and job orders.

Education

B.Tech | Information Technology | Dr. Sivanthi Aditanar College of Engineering 2010 – 2013
